HAMZA BOUSSETTA

Software Engineering Student

Rabat, Morocco | hb.hamza.bst@gmail.com | +212 649 797 790

PROFILE

Software engineering student at 1337 Coding School (UM6P), nearing completion of the Common Core, with a degree in Mathematics and Computer Science. Practical experience in C, C++, Python, and Docker, complemented by skills in prompting generative AI tools.

EDUCATION

1337 Coding School (UM6P), Rabat Oct 2024 - Present

Software Engineering Program

- Common Core nearing completion; project-based learning with peer review and collaborative development.

ENS, Tetouan Sep 2021 - Aug 2024

Degree in Mathematics and Computer Science

SELECTED PROJECTS

AI Coding Study Assistant

Proposed personal project using Python and generative AI.

- Planned features include explanations of programming concepts, guided debugging, and practice questions generated from study notes.
- Planned approach uses structured prompts and iterative refinement to make responses relevant to the learner's level.

Inception

- Built and configured a Docker environment as part of the 1337 Inception project.

Minishell

- Developed shell functionality for command execution, built-in commands, quote parsing, and environment variable expansion.
- Worked on redirections, pipes, and signal handling, with a focus on memory leak checks using Valgrind.

TECHNICAL SKILLS

Programming: C, C++, Python

Tools and practices: Generative AI, machine learning, prompt engineering, Docker, Valgrind, debugging, memory management, peer review.
